Biomass Briquetting Manufacturer

JAY KHODIYAR
MACHINE TOOLS
Converting Agro waste Into Gold
Since 1994

Biomass is natural waste that comprise of sugarcane stalk, agricultural waste, forestry waste, saw dust waste, etc. This waste material is compressed to form a perfect shaped block. Jay Khodiyar Machine Tools has gained top reputation as the manufacturer of biomass briquetting. We are even the supplier and exporter of these biomass machines that are useful in preparing briquettes of perfect shape and size.

Biomass Briquetting India

The briquetting machines have become a great requirement of the industry to make the briquettes. The biomass briquetting machine is provided in various specifications as per the need of the client and according to the type of material that is to be used to prepare the briquette. We have established our market of biomass briquetting in all over India.

Andhra Pradesh	Arunachal Pradesh	Assam	Bihar	Chhattisgarh
Goa	Gujarat	Haryana	Himachal Pradesh	Jammu and Kashmir
Jharkhand	Karnataka	Kerala	Madhya Pradesh	Maharashtra
Manipur	Meghalaya	Mizoram	Nagaland	Odisha
Punjab	Rajasthan	Sikkim	Tamil Nadu	Telangana
Tripura	Uttar Pradesh	Uttarakhand	West Bengal	

Briquetting Plant

Briquetting Plant is used in many industries to make the briquettes of various materials that are non usable. The main benefit that the briquetting plant offers is that they are a mean to convert waste into money. This helps in solving the problem of waste material disposal. Also the briquetting plant comes in various models as per the demand of the client and as per the shape and size of briquette that is required. The models of machine are made as per the industry specific dimensions and are also customized as per the need of the client.

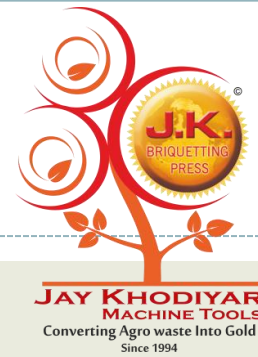

Biomass Briquetting Plant

The biomass briquetting plant is used to compress the bio-waste into briquette of specific shape and size. The biomass plant has the capacity of crush the waste into small pieces and then compresses it with high pressure to get uniform shape. The final step to prepare biomass briquette is drying the briquette to increase their life span. This briquetting plant is offered at best price range in India as well as other countries of the world. The biomass briquetting plant is prepared using the best quality materials and is designed by top professionals of our company.

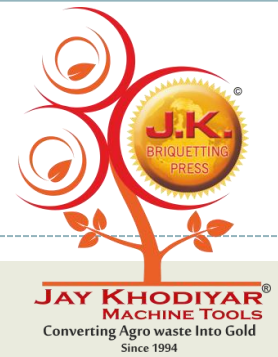

Biomass Briquetting Technology

The briquetting technology is the latest technology that is used to convert biomass waste into briquette. It is one of the most widely used and demanded among the world because of the advantages offered by them. The use of biomass briquetting technology has helped to improve the utilization of waste and reduce the use of non renewable resources like coal, charcoal, etc. The biomass briquetting plant is prepared using the best quality materials and is designed by the top professionals of our company
